

Setting the record in the SA mining industry

OE Bearings, South Africa's split bearings specialist, has announced that it has converted 55 surface vent fans in the SA mining industry since 2002, believed to be the highest number of surface vent fans to be converted by one company in the industry.

The massive saving in downtime on this critical equipment has seen more and more end users specifying split roller bearings on new fans.

This was confirmed by OE Bearings MD, Warwick Steinhobel, who said the surface vent fans were installed at a number of clients spanning the gold, platinum and iron ore market sectors. "In spite of the current economic times we expect more conversions on existing fans to take place due to the huge benefits of splits."

OE Bearings is now active throughout the SA mining and heavy industry market sectors, as well as in countries that include Tanzania, Kenya, Ghana, the Democratic Republic of Congo and Nigeria.
